Summary

Results-driven Software Developer over threefold years of experience in building high-performance mobile and web applications using React and React Native. With expertise in diverse domains, I excel at crafting scalable, intuitive, and efficient solutions while ensuring seamless user experiences. I actively implement the Atomic Design methodology to build modular, reusable, and maintainable UI components, improving consistency and development efficiency. Known for strong problem-solving abilities, excellent communication skills, and a collaborative approach, I thrive in dynamic environments, driving innovation, and delivering impactful B2B applications.

Technical Proficiency

- **Languages & Frameworks:** Html, Css, Bootstrap, JavaScript, TypeScript, React.js, React Native
- **Payment Gateways:** Razorpay, Stripe
- **Operating Systems:** Ubuntu (16/18/20), macOS
- **Development Tools:** BitBucket, GitHub, GitLab, Favro, Asana, Jira, Slack, Postman, Swagger
- **Other Technologies:** Firebase, Redux, SonarLint, Google Play Console, App Store, Push Notifications

Education

Panjab University, Bachelor of Computer Applications	June 2019 – June 2022
Punjab School Education Board, Senior Secondary	April 2016 – April 2018

Work Experience

Debut Infotech Pvt. Ltd., Software Developer Sep 2023 – Present

- Developing high-performance mobile and web applications using React.js, Next.js and React Native.
- Working with development tools such as GitHub, BitBucket, Jira and Slack.
- Implementing Firebase, Redux, SonarLint, and push notification services.

Ittechxpert, Software Developer Oct 2021 – Sep 2023

- Developed and optimized mobile and web applications.
- Worked with React.js, React Native, and state management tools like Redux.
- Integrating payment gateways like Razorpay and Stripe.
- Enhanced app performance by improving data management and UI efficiency.
- Collaborated with cross-functional teams for seamless project execution.

Projects

- **The Baby Journey** - A Sweden-based mobile application designed for expecting mothers to track their pregnancy and monitor child development into the toddler years.
 - Implemented real-time pregnancy tracking and milestone notifications.
 - Integrated Firebase for secure authentication and cloud storage.
 - Enhanced user engagement with personalized progress reports.
- **Catalyst** - A mobile application designed to enhance gaming knowledge through interactive card-based quizzes.
 - Developed a swipe-based interface to reveal quiz answers interactively.
 - Worked with an admin panel for managing quiz content dynamically.
 - Optimized app performance for smooth navigation and user experience.
- **Encrypted Cash - Crypto Transaction Platform** - A secure and decentralized crypto transaction platform allowing users to send, receive, and track digital assets in real-time.

- Developed the frontend using NextJS, ensuring a smooth and interactive user experience.
- Integrated Web3 and Wagmi authentication using MetaMask, providing secure and seamless login for users.
- Worked with smart contracts to facilitate secure transactions, ensuring decentralized and trustless payments.
- Optimized performance by reducing API latency, improving load times by 35
- **RVA IDO - Token Launch Staking Platform** - A blockchain-powered Initial DEX Offering (IDO) platform that enables users to participate in token launches, stake tokens, and manage KYC verification.
 - Developed a dynamic UI with NextJS, ensuring an interactive and efficient token sale experience.
 - Implemented staking functionalities using Web3 and Wagmi, allowing users to stake, unstake, and claim rewards directly from smart contracts.
 - Integrated Context for state management, ensuring smooth data flow between user interactions and API responses.
 - Built a secure KYC verification module with document uploads and real-time approval tracking.
 - Optimized blockchain API calls to reduce transaction wait times and increase platform efficiency.
 - Collaborated with backend and smart contract teams to integrate Web3 wallet authentication and token purchase flows.
- **Roadside Response** - A leading roadside assistance mobile app offering services such as vehicle unlocking, breakdown assistance, and flat tire repairs.
 - Integrated service requests, allowing users to contact assistance providers in real-time.
 - Implemented location-based tracking for users to find nearby service providers.
 - Merged services similar to Uber to enhance response times and efficiency.
- **Ceta - Bio Matrics** - A South African government initiative using facial recognition technology for student attendance tracking.
 - Expanded the system to allow attendance logging from unassigned locations.
 - Upgraded data management by transitioning from AsyncStorage to SQLite for efficient storage.
- **Traya Health** - A mobile application for healthcare video content, offering an interactive and user-friendly experience.
 - Enhanced video functionalities, including interactive thumbnails and seamless navigation.
 - Implemented user authentication, requiring signup or login to access the comment section.
 - Optimized app performance for fast loading times and smooth video playback.
- **Rocketship** - A marketing tool built using PostgreSQL, Express.js, and Handlebars, designed to help websites add interactive buttons for marketing purposes.
 - Developed an admin panel to allow businesses to create customizable CTA buttons.
 - Integrated backend functionalities using PostgreSQL and Express.js for efficient data handling.
- **Market Chalo** - A WebView-based mobile application that integrates an e-commerce website into an Android app.
 - Successfully launched the app on the Play Store after resolving critical UI issues.
 - Fixed font size discrepancies and layout distortions to meet Play Store requirements.
